(a)
HVA, $N = 8$
accuracy, all test fields
error budget λ
train ED
train noiseless circuit
train = test noise
train mixed
leave one out
all fields called disordered
(b)
HEA, $N = 8$
accuracy, all test fields
error budget λ
(c)
ZNE window
$h_c^{\mathrm{ML}} - h_c^{\mathrm{ML}}(\mathrm{noiseless})$
error budget λ
$N = 4$
$N = 6$
$N = 8$
unmitigated
ZNE
squares: HEA
