(a) entanglement capacity, $N = 12$
$S(N/2)\,/\ln 2$
depth $p$
rank bound
HVA max $S_2$
HVA random, mean $S$
HEA max $S_2$
HEA random, mean $S$
Page
ED max over $h$
(b) achieved vs allowed by rank, $N = 12$
infidelity at $h_c$
HVA $1 - F_{\mathrm{GS}}$
HEA $1 - F_{\mathrm{GS}}$
smallest allowed by rank $2^p$
depth $p$
